Clay-Based Wastewater Treatment Flocculants

B-Clear™ Reactive Separating Agents

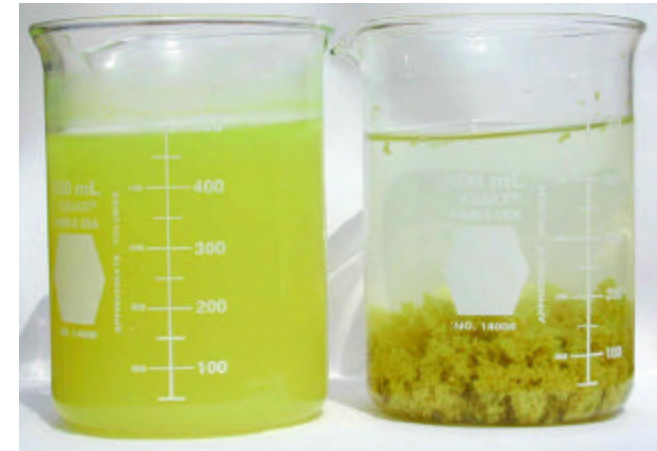

BJAAM's clay-based treatment chemistries are a unique, non-hazardous blend of clay minerals, polymers, dry acids and bases, and other additives, which react in a pre-determined sequence to break oil emulsions, precipitate metals, and remove and encapsulate these and other contaminants from wastewater. **Advantages of use include:**

- Easy to apply, one-step treatment
- Rapid reaction and short mix time
- Removes oils, metals, suspended solids
- Produces large, easily de-waterable floc
- Yields clean water for sewer or re-use, and non-leachable sludge
- Safe – no hazardous liquids to handle or store

Wastewater Types

- Fluorescent penetrants
- Water soluble coolants
- Ink and paint wash waters
- Mop and scrubber waters
- Parts washing
- Die casting
- Vibratory deburring
- ...and other wastewaters
